
Electric ELVES

The programme for industrial batteries from hybrid and electric vehicles in Ireland Information for Authorised Treatment Facility (ATFs)

The Electric ELVES programme has been set up by ELVES, the Irish compliance scheme for End-of-Life Vehicles to provide support to Authorised Treatment Facilities (ATFs) when they receive an electric, hybrid, plug in hybrid, or mild hybrid vehicle.

Support provided:

The programme provides a variety of supports to ATFs in the handling of these vehicles including:

- hybrid and electric vehicle awareness training;
- information on safe battery removal via the International Dismantling Information System (IDIS);
- additional manufacturer support in the event of a damaged battery;
- free collection and recycling of batteries if required.

What & who does it cover?

The Electric ELVES programme is available free of charge to all ATFs, not just those in the ELVES Network. It covers industrial batteries in the full range of electric and hybrid vehicles, including the smaller li-ion batteries found in mild and micro hybrids.

How does it operate?

If you receive a hybrid or electric vehicle at your ATF, you can contact ELVES for support. ELVES can provide you access to the latest dismantling information, additional support in the event the vehicle/battery is damaged, and free collection and recycling of the battery if you require it. ELVES also regularly runs training courses on hybrid and electric vehicle awareness. ATFs are encouraged to register their interest in participating in future training courses with ELVES.

ATF operators will have already received information on the programme by post. ATFs can also download information from our website: www.electricelves.ie

Further information:

For further information on the programme, please see the ELVES website www.electricelves.ie or contact ELVES at info@elves.ie.
